DB Access Editor

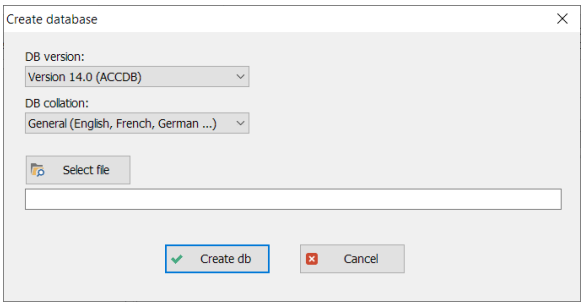
Main functions:

- management of the ACCDB and MDB databases (create a new database, modify and convert current database)
- db structure overview with data preview
- table, field and index modification
- view modification
- relation modification
- MS Access application is not needed

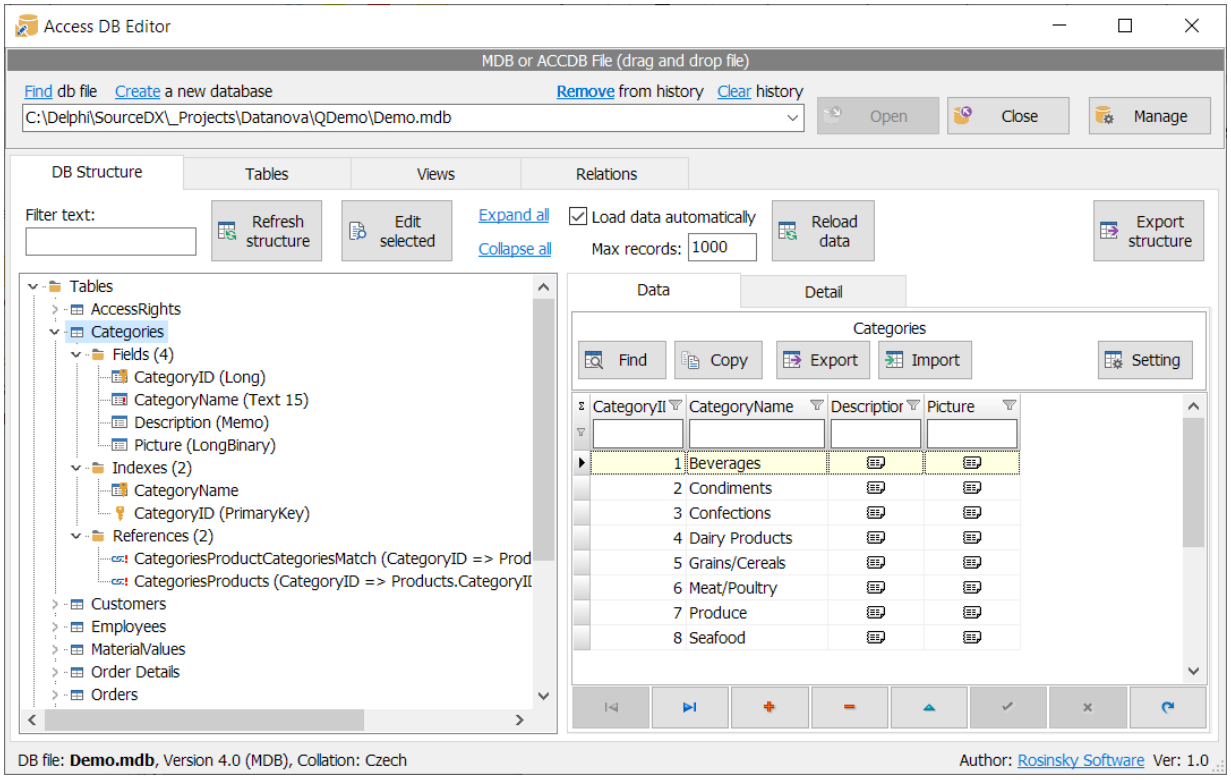
How to use it

Open database

Select existing ACCDB or MDB file or create a new one.



DB structure is loaded and shown.



Selected item (Table, Field, Index, View, Relation) can be edited, then tab with the details of specified items is shown. Each tab can be used also directly with manual selection of the edited items.

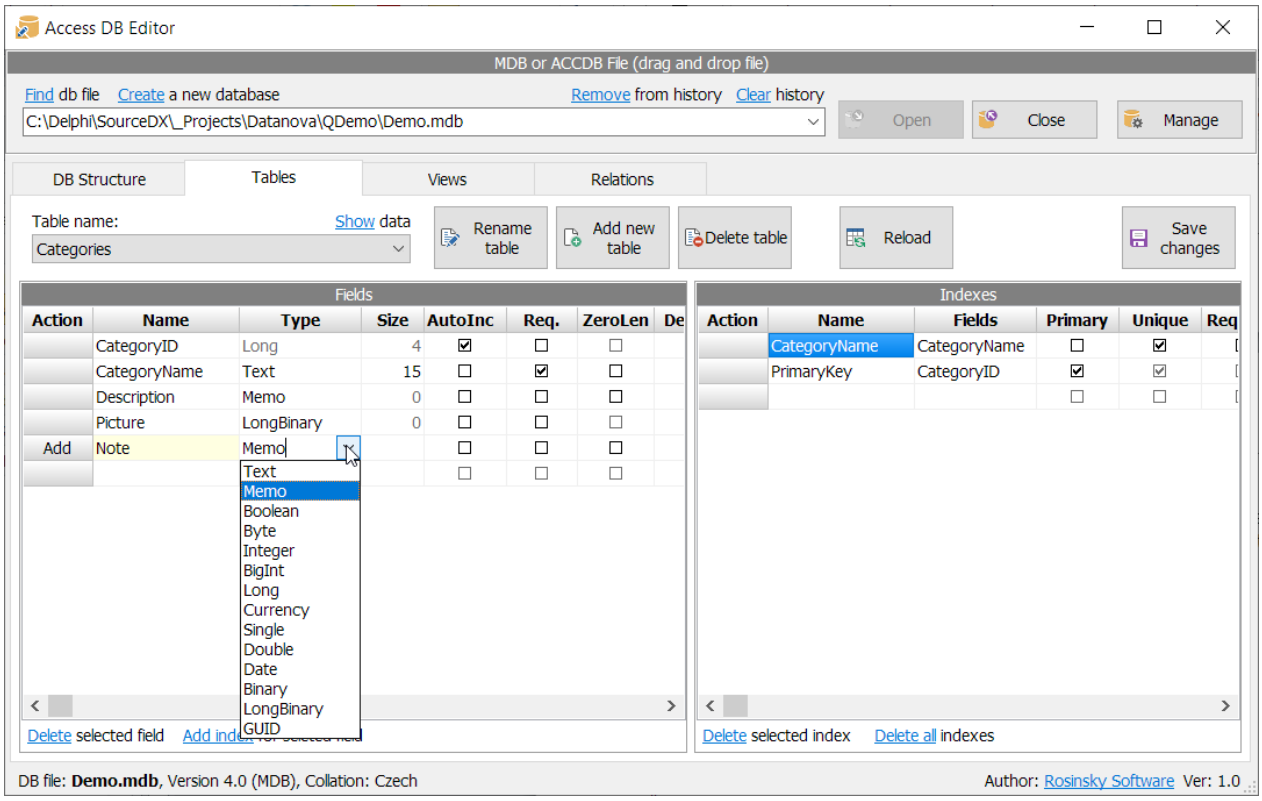
Table management

Select tab Tables

Add new table or select existing table

Modify fields and indexes (new index for the selected field can be added automatically by click to Add index)

Save changes



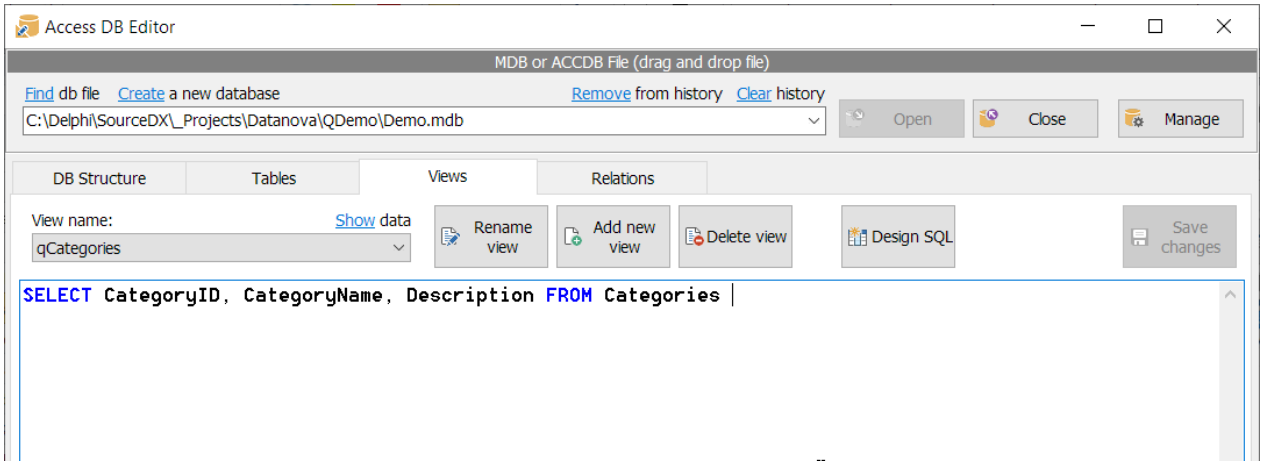
View management

Select tab Views

Add new view or select existing view

Modify sql manually or click to Design SQL

Save changes

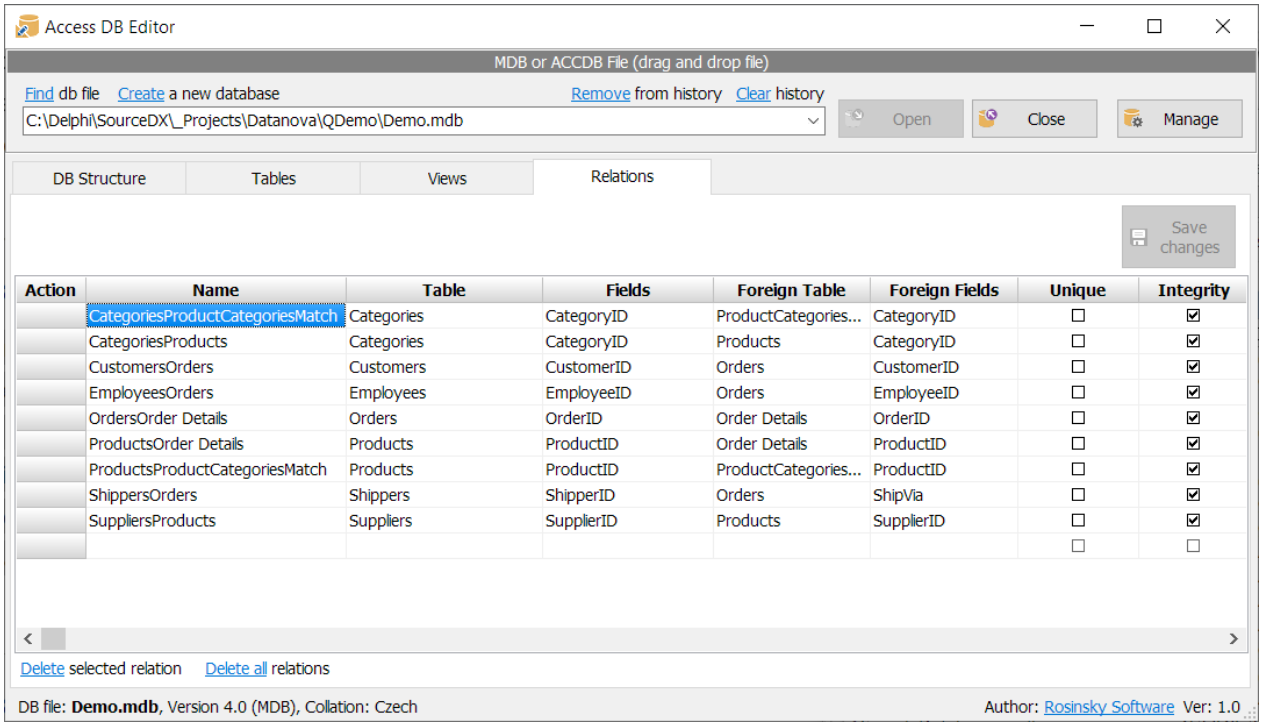


Relation management

Select tab Relations

Add new relation or modify existing relation

Save changes



Database management

Click to Manage

Compact database, set a new password or change DB version or collation

Save as current or as a new database
